plan - update
maps

due June 13'08

Mike,

Thank you for meeting with us today to discuss the Keigley Quarry plan, including providing the maps overview. It is apparent that plan modifications must occur, and a commitment was made to achieve that end. In the interim, the maps (with changes/updates as discussed), will be submitted to the Division by June 13, 2008. The maps will be supplemented by a narrative and will all be included as an appendix to "Geneva Steel Keigley Quarry Amendment, M/049/001-92(1)" This submittal will be supported by a cover letter and the completed form MR-REV. Please include the tabbed and labeled insert as well.

As part of the plan modification effort, we all agreed to a 'kick off' meeting to ensure you have adequate information to move toward a complete and accurate plan submittal.

As mentioned in our discussion, you may request a 'compliance conference' to be held on-site to review the compliance status of any mining conditions or practices, including reclamation. The conditions and practices will be reviewed by the Division and we will advise whether and practice or condition can become a violation under the Act and permit. This request should be done in writing. The compliance conference can be a useful tool to assist you in developing a better understanding of the rules and not receive a violation (unless there is imminent harm to the public or environment)

Again, thanks for attending the meeting today. We look forward to receiving **two** plan appendix submittals on or before June 13. Call with questions or answers.
